

# Cypher360

Automated Workflow Documenter

Cypher360 is an automated tool that examines K2 4.6.11 and above workflows to create comprehensive and accurate workflow documentation with easy to understand visual diagrams. With Cypher360 all key components of a workflow are automatically documented within minutes, a task that could otherwise take hours or days to complete.

Cypher360 provides a consolidated sequential data list of all K2 activities and events for any given workflow. The workflow details are displayed in a user-friendly format for quick and easy review.

## Consolidated Sequential Lists all on One Page

Default Outcomes, Destination Sets,  
DataFields, Events,  
SmartObjects, SmartForms,  
IPC Calls

## Less Clicking with an Expandable Viewing Area

No need to drill down  
and get lost in a  
countless number  
of tiny windows

## Clear Visual Diagrams

Welcome Package  
Original Path: Workflow\Welcome Package.k2m

## Clearly Outlined Routing Specifications

Routing line names,  
logical conditions,  
destination settings, and  
other relevant  
routing information

## Easy to Read Diagrams that Mirror the Workflow

Quickly convert K2 workflows  
into a visual diagram  
where each activity is  
automatically linked to  
the workflows data

## OUR SERVICES

Many companies struggle with error-prone manual processes across disconnected systems. Method Automation excels at solving the challenges that occur with building and supporting critical business solutions. Method Automation has delivered hundreds of initial K2 platform applications to help small and enterprise organizations achieve their goals.

## BUSINESS PROCESS AUTOMATION BENEFITS

Process Automation combined with Workflow Integration simplifies and improves business processes. Consistent automated business rules streamline cross-departmental efforts and accelerate tasks and procedures. A configurable digitized form solution guarantees your data will automatically and safely flow in and out of your current business systems. Here are a few more reasons why we use K2.

- Low-code process automation tool
- User-friendly & re-usable forms
- Automatic notifications
- Clear process visibility
- Content permission control
- Customized reporting system and full audit trails
- IT department backlog reduction
- Administrative process approvals, security setup, & error handling
