

WORK HEALTHY SOLUTION

Keep employee health and safety a top priority while mitigating the risks of COVID-19

www.method-automation.com

Built on the K2 Five platform, Work Healthy is a flexible solution that can help organizations looking to rapidly deploy an employee-centric screening program for COVID-19. Work Healthy is a secure, cloud-based application that can be configured and installed in a matter of days, allowing a business to re-start while keeping employee health and safety as a top priority. Work Healthy is fully configurable to accommodate federal, state, local, or industry-specific guidance. It provides your organization with a simple way to implement an auditable screening process, protecting both the organization and the employees.

Online Health Check Process

- Self-reported or employer-captured
- ISO 27001 certified for safety and security
- Mobile capabilities with text messaging and email notifications

Real-Time Dashboard

- Measure key metrics across the organization
- Fully auditable process with built-in reports

Notifications

- Send specific guidance when employee status changes
- Manager notifications for out-of-office and target return date

Configurable

- Incorporate federal, state, and/or industry guidelines
- Establish company-specific policies and procedures

OUR SERVICES

Many companies struggle with error-prone manual processes across disconnected systems. Method Automation excels at solving the challenges that occur with building and supporting critical business solutions. Method Automation has delivered hundreds of initial K2 platform applications to help small and enterprise organizations achieve their goals.

BUSINESS PROCESS AUTOMATION BENEFITS

Process Automation combined with Workflow Integration simplifies and improves business processes. Consistent automated business rules streamline cross-departmental efforts and accelerate tasks and procedures. A configurable digitized form solution guarantees your data will automatically and safely flow in and out of your current business systems. Here are a few reasons why we use K2.

- Low-code process automation tool
- User-friendly & re-usable forms
- Automatic notifications
- Clear process visibility
- Content permission control
- Customized reporting system and full audit trails
- IT department backlog reduction
- Administrative process approvals, security setup, & error handling
