

# Automate routine tasks at scale without code

## Nintex RPA (Robotic Process Automation)

With Nintex RPA, enterprises can quickly and cost-effectively automate routine tasks without the use of code in an easy-to-use, yet powerful drag and drop interface. As part of the award-winning Nintex Platform, users are now equipped with a comprehensive, enterprise-grade process management and automation solution, equipped to handle processes fueled by both structured and unstructured data sources.

**Enterprise-grade RPA doesn't have to be hard to use, cost a fortune or take forever to realize outcomes**

**Ease of Use + Power**

Intuitive interface is easily usable by non-technical employees, with robust capabilities meant for the enterprise.

**Total cost of ownership**

Transparent pricing charging only for processes automated with unlimited bot usage.

**Fast time-to-value**

Real results in hours and days, not months. Changes can be implemented even faster.

# Automate routine tasks at scale without code

## Pay for outcomes – not by the tool

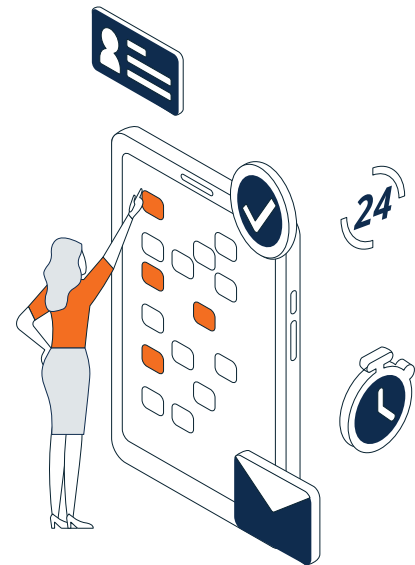

While it's common for RPA users to tout how many bots they have in place, wouldn't it make sense to focus on the outcomes instead?

**With Nintex RPA, you only pay for the processes automated, not the number of bots or even the creation of new processes.** Digital transformation is complex enough, why not introduce a little transparency and simplicity in how you tackle it?

## Automation at scale

While you want to automate the many manual, time-consuming tasks in your enterprise, deploying RPA-powered processes can be slow-to-scale if the tools aren't easy enough for non-technical employees to use.

**Nintex RPA's intuitive visual drag & drop tools enable more workers to introduce efficiencies across the organization, rather than being limited to a few skilled programmers.**

## Automate across web, Excel and legacy applications

Valuable data can be found in numerous locations across the enterprise, from spreadsheets, websites and even legacy applications.

**Nintex RPA provides over 300 actions to enable you to easily connect to them all to get your automated tasks running in minutes – no programming skills required.**
